" EXPECT MORE "

ABOUT US

APPLY and More® is an engineering services firm located in Cairo, Egypt. With an experience of more than 15 years, Apply and More has delivered projects in different countries worldwide. The core activities of the company are informatics and engineering specially in AEC firms such as Buildings , Roads ,and Infrastructure including all associated Landscape and Civil works.

OUR MISSION

Our services are delivered with the best quality through carefully planned steps, adhering to a set schedule, and daily communication to ensure being on time and within budget.

"Turning ideas into reality"

QUALITY

INTEGRITY

RELIABILITY

OUR VISION

Our company takes pride in offering locally-operated services that are managed by talented teams and international partners. We believe in producing simple solutions to complex challenges, and we do so by applying solid experience and a professional approach.

EXCELLENCE

DEDICATION

Innovation is at the
heart of all our designs.

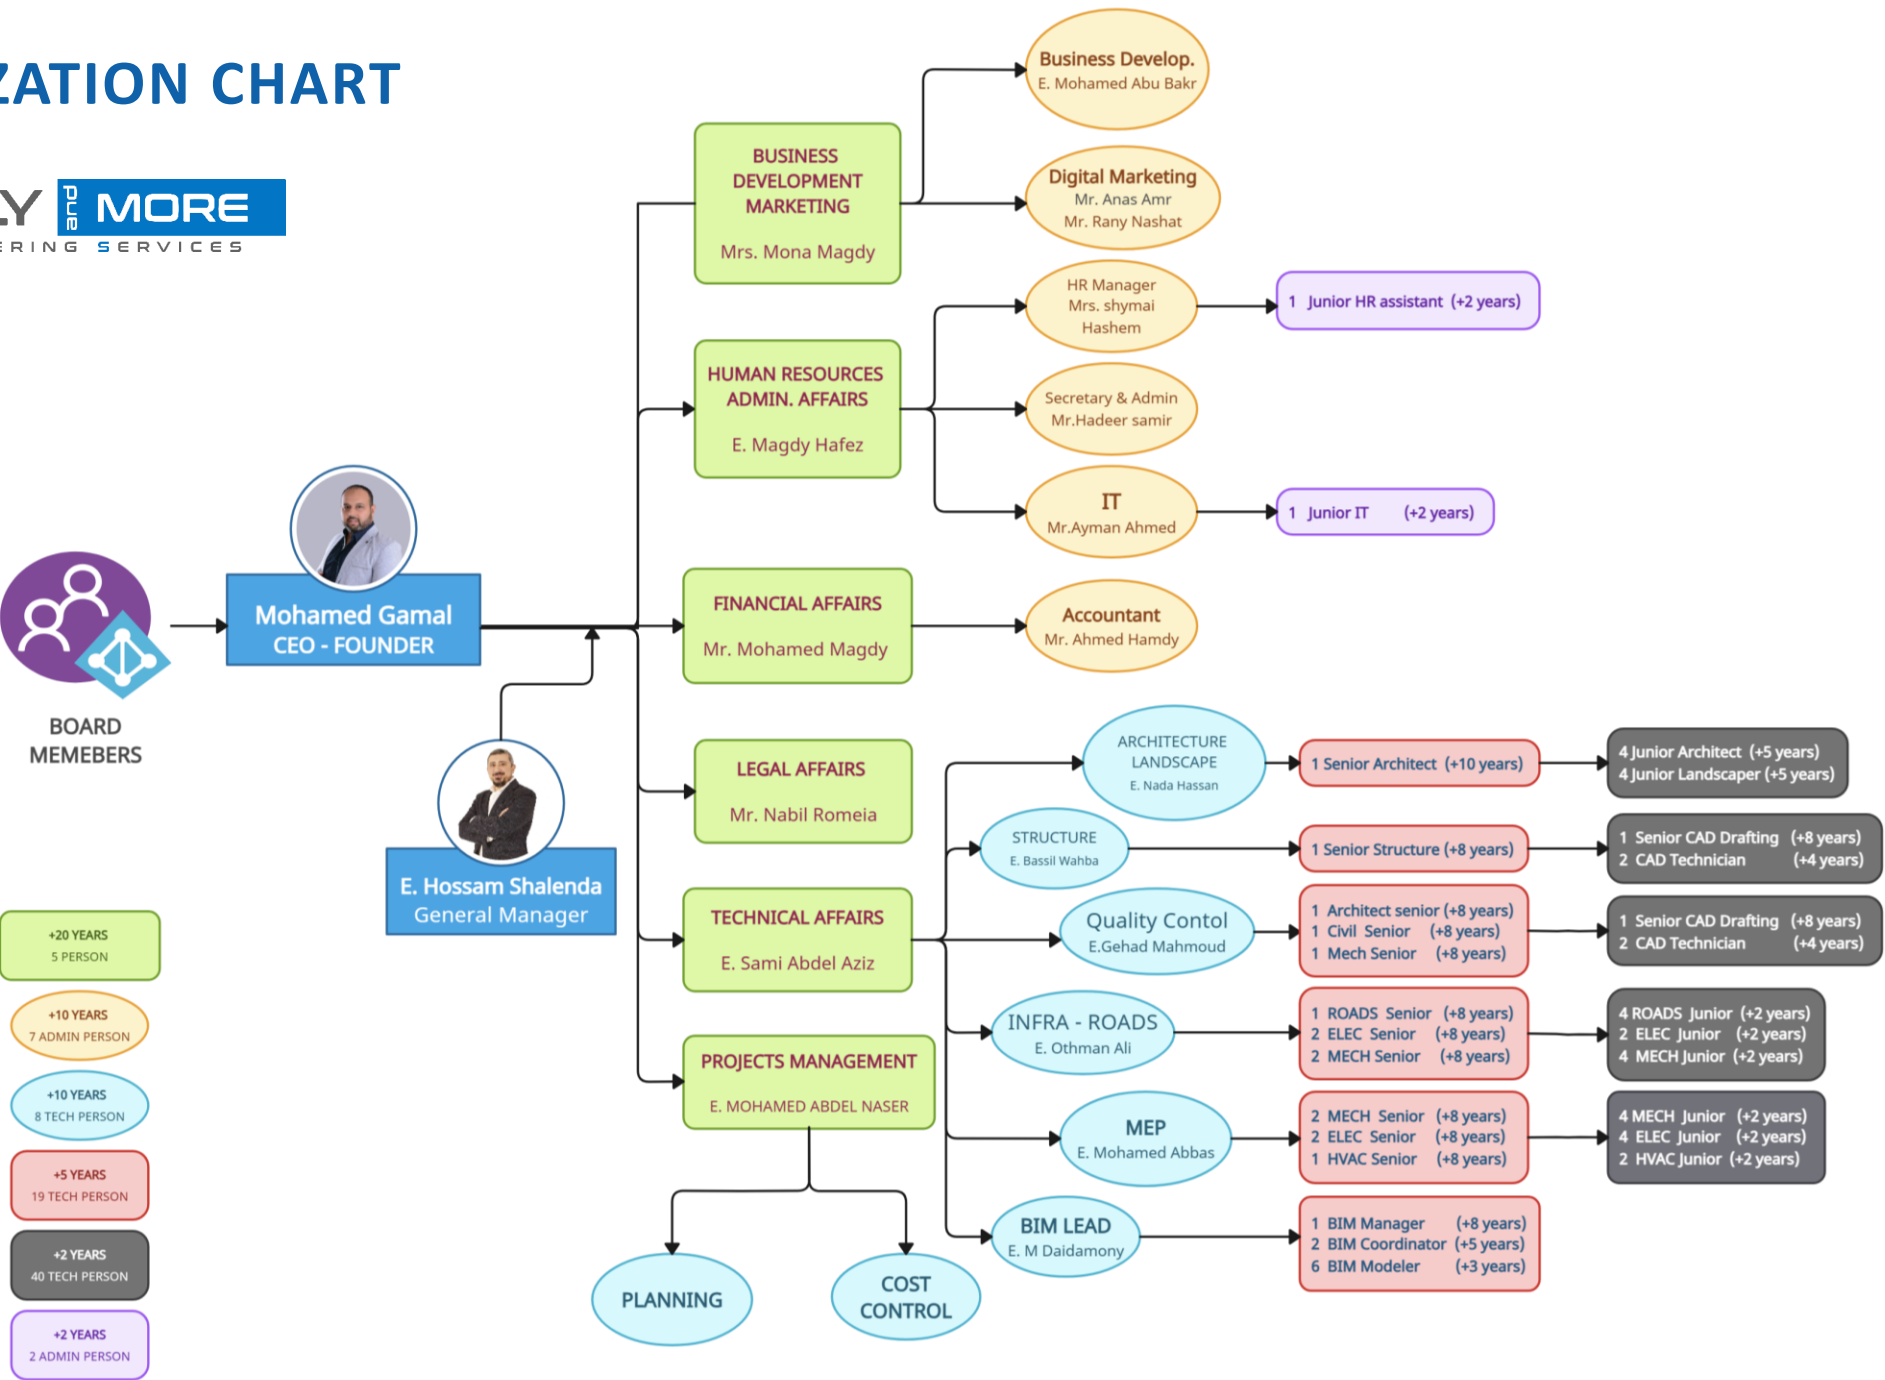

CEO-Founder

M U H A M A D G A M A L

With over 16 years of experience in the Engineering Services industry, I bring a wealth of expertise to my role as CEO of **APPLY AND MORE CO.** Our company is known for delivering high-quality services to the engineering industries, with a focus on adapting to changing business needs through automation and value addition. Our highly skilled and motivated team in Egypt is renowned for its competitive talent pool in technology. We are fully equipped to drive the industry's vision for technology and innovation in The Architecture, Engineering, and Construction (AEC) services sectors.

APPLY has significant expertise in Engineering consulting and construction, with a focus on building, road, and infrastructure projects across Egypt, Gulf Countries, Europe and USA. As early adopters of Building Information Modeling (BIM) and Geographic Information Systems (GIS), the company has excelled as a BIM consultant and design house for major projects since transitioning to a BIM-centric workflow in 2013. APPLY offers consulting, training, and supervisory services, leveraging its deep software and programming skills to enhance stakeholder engagement and digital transformation in infrastructure development. Known for its commitment to excellence and industry leadership, APPLY is a trusted advisor and an essential partner in navigating the complexities of modern construction and infrastructure projects.

ORGANIZATION CHART

- » Fostering a team atmosphere, encouraging positivity, preventing conflicts, promoting awareness of team goals, improving performance, ensuring discipline, determining work culture, attracting potential members, promoting growth, and improving reputation are all vital aspects of our organization.

Recycled Water System from Sewerage Water Treatment Plants

Location: Riyadh, Qassim, Madinah and Najran, KSA

» WATER is an important natural resource and is necessary for the survival of all living things. With industrial development and the increase in population, there has never been more demand on water resources like what we are seeing today around the world. Moreover, climate change effects such as droughts and desertification are a problem that many countries are facing, especially in the Middle East and North Africa. Thus, reusing treated sewage effluent (TSE) will be essential to overcome the water scarcity.

» We've implemented BIM models for LOD 500 and offer 3D modeling and visualization services to provide a realistic view of your project and ensure accurate representation of all aspects.

- » The Wadi Niqab Dam is part of the project to improve infrastructure and strategic facilities in Ras Al Khaimah. The dam is 22 meters high, 257 meters wide, and can hold about one million cubic meters of water. It is located in the main Negev Valley, 6 kilometers from the confluence of three valleys in the Al-Fahlin area. Specific water channels with lined paths, lakes, and barriers will be extended to absorb and store rainwater.

The Dam is scheduled to be completed at the beginning of next September and will absorb 2 million cubic meters of rainwater over an area of 100,000 square meters. The project is implemented by the Public Services Department in Ras Al Khaimah, represented by the Public Works Agency.

- » Achieve better results with our BIM model LOD 500, Our model comprises signage, marking, elements, bridge culverts, and roads.
- » 3D visualization
- » Don't settle for less, choose our BIM model for efficient and effective project completion.

The Roads and Traffic Agency is collaborating with Ghent to replace the bridges over E40 in Kloosterstraat and Deinsesteenweg. As per N466, the newly constructed Kloosterstraat Bridge will only allow traffic to and from the industrial park, redirecting other traffic via Baarleveldestraat. Unfortunately, this will lead to an increase in the volume of traffic in residential areas such as Moerstraat, Varendries, and Raapstraat. Furthermore, there will be an increase in traffic in Baarleveldestraat and Baarle Center bridge. The primary objective of the replacement is to enhance access to the industrial zone, Leefbaar Drongen, and Leefbaar.
